

Assignment-5

Create a web server using Node and Express,render your name

Procedure:

Step-1:

Create a folder in the vs code and create a file naming as app.js.

Step-2:

Open the vscode terminal ,and run the command

```
npm install express --save
```

Source code:

```
const express=require('express');
var app=express()
app.get('/',function(request,response){
  response.send("hi ammu");
})

app.get('/ammu',function(request,response){
  response.send("you are in express");
})
app.listen(2000,function(){
  console.log('server started');
})
```

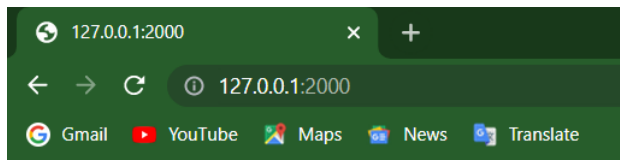

Run the code in the terminal by using the command `node.app.js`.

Output:

```
PS D:\s_internship\express to create webserver,render name> npm i express --save
added 58 packages in 6s

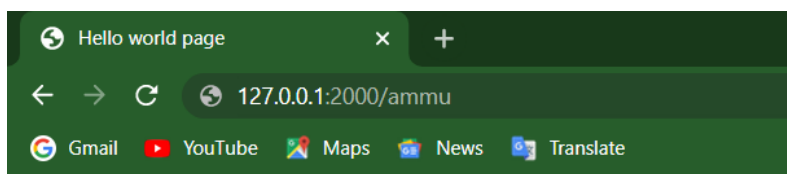

8 packages are looking for funding
  run `npm fund` for details
PS D:\s_internship\express to create webserver,render name> node app.js
server started
```

Open the browser and click the link 127.0.0.1:2000/

hi ammu

And call the another handler 127.0.0.1:2000/ammu

we are in express session
